

Daily Outlook

This product provides fire personnel with a quick-briefing tool for obtaining weather highlights for Days 1 and 2 in their Geographic Area. The GIS-based graphics in this product combine three predicted elements from the NWS national gridded database: minimum relative humidity, wind speed and wind direction. Daily weather symbols are then added by Predictive Services meteorologists, who also write a weather synopsis along with a 3 to 7 Day narrative outlook which highlights any anticipated significant fire weather for that period.

Issuance Schedule: South Ops 930 am Pacific Time and North Ops 1000 am Pacific Time. Issued daily during fire season, and M-F during low season.
